Attn: Mr. Rodney Smith

Dear Sir:

We have contracted Smith-Midland to design, fabricate and install three Pre-Cast Concrete single story electrical buildings for Lehigh Portland Cement for the Union Bridge Modernization Project. When these 30'-0 wide buildings arrived on site it took less than one-week for each to be erected. These buildings ranged from 60'-0 to 100'-0 in length. The cost and time advantage over conventional masonry was exceptional. The Turnkey method provided the Project with a timely and cost effective solution to our Electrical Room building construction.

The fast track design/build solution placed the first Electrical Room erected on site within twelve weeks after placement of order.

I would like to thank Smith-Midland for their participation and assistance in making the Union Bridge Modernization Project a success.

Thank You

Randy Newton
Manager of Construction Engineering
